Reply of Government.—(1) Noted.

(2) Orders have been issued for setting apart places for storing manure. Enquiry will be made as to why places have not been set apart in the Harnhalli hobli, Hunsur taluk.

SUBJECT No. 221.

Increasing the number of vaccinators.

Messrs. Adappa, Tumkur taluk, and Hanumantha Rao, Devanhalli taluk.

Summary of discussion.—(*a*) There is only one vaccinator at present for every taluk. One vaccinator cannot visit each and every village even once in a year. Hence many children remain unprotected. It is therefore requested that one or two additional vaccinators may be appointed for each taluk and that some allowance be given to them in addition to their pay so that they may visit each and every village in the taluk oftener.

(*b*) Patels who keep the birth and death registers may be made to note therein whether the village was visited by the vaccinator and how many people were vaccinated.

Reply of Government.—(*a*) Vaccinators visit villages according to a programme previously made. There is no necessity to increase the number of vaccinators.

(*b*) Noted.

SUBJECT No. 222.

Destruction of lantana.

Messrs. M. Subba Rao, Heggaddevankote taluk, and Sura Sastry, Chikballapur taluk.

Summary of discussion.—The growth of lantana has become very extensive. It is prayed that a rule be framed directing the destruction of the same by the people in their respective villages, gomal lands, kavals, etc. Arrangements may also be made for awarding medals to those that remove lantana on a large scale. Lantana and prickly-pear are very useful as manure.

Reply of Government.—A note explaining the usefulness of lantana and prickly-pear as manure may be got published in the *Vrittanta Patrika* or the *Vokkaligara Patrika*. It can also be published in the *Revenue and Agricultural Gazette*. [In an official paper published as a supplement to the *Mysore Gazette* some time ago, reference has been made to an insect which destroys lantana growth.]

SUBJECT No. 223.

Sanitary improvements in taluk headquarters.

Mr. Venkataramaiya, Hole-Narsipur taluk.

Withdrawn.

SUBJECT No. 224.

Extension of village sites.

Messrs. Mahalinganna, Hassan taluk, and Ramaswamisetty, Arkalgud taluk.

Summary of discussion.—(*a*) Consequent on the increase of population, as shown in the recent Census, there has been difficulty for suitable sites for building houses in villages. The existing village sites or "gavtans" allotted a long time ago are insufficient. Pray therefore that during resurvey, arrangements may be made to extend

the village site by acquiring convenient dry fields, whether occupied or not, to ensure better sanitation in such villages.

(*b*) Recently, Government have been pleased to order that plots for new village sites and extensions to existing village sites are to be approved of by the District Medical and Sanitary Officer, before they can be allotted for building purposes. But as the rule is found to be impracticable owing to the fact that, in a district, there is only one District Medical and Sanitary Officer, it is prayed that the old practice of selection of suitable sites by the Amildars and the Assistant Commissioners be revived as this would go a great way to help the people in their difficulties.

Reply of Government.—Facilities are being given for village extensions in the manner suggested. Except where large and important extensions are concerned, Deputy Commissioners or Assistant Commissioners and the Amildar and the Hospital Assistant of the taluk ought to be able to constitute themselves into a committee together with one or more members of the District Board where available and decide upon the eligibility of sites selected for such extensions, without requiring the District Medical and Sanitary Officer to advise in every individual case.

SUBJECT No. 225.

Demonstration of the "Automatic Water Finder" invented by Messrs. W. Mansfield & Co.

Mr. S. Sitaramaiya, Shimoga Municipality.

Summary of discussion.—The "Automatic Water Finder" invented by Messrs. W. Mansfield & Co. of Liverpool to find the depths of subterranean water courses may be purchased by Government and the use of the instrument demonstrated to the public.

Reply of Government.—It is not known that the instrument referred to is reliable and useful. It appears that it is being tried in Bombay. The result will be awaited.

EDUCATION.

(*Nos. 226 to 286.*)

SUBJECT No. 226.

Free compulsory elementary education.

(*a*) Messrs. Sidde Gowda, Mudgere taluk, U. Shiva Rao, Manjiah, Chikmagalur Municipality, C. Vasudeva Rao, Chikmagalur taluk, Girmaji Rao, Buchaiya Setty and Venkatappa Setty, Kolar Municipality, Sreenivasa Sitaram Kulkarni, Chitaldrug District Board.

(*b*) Messrs. Balakrishna Rao and Subba Rao, Shimoga Municipality.

Summary of discussion.—(*a*) Elementary education may be made compulsory throughout the State to remove the existing ignorance of the people.

The scheme which may be prepared on this subject by the Economic Conference may be placed before the Representative Assembly and its opinion obtained.

(*b*)—(1) In order to make primary education compulsory, a beginning may be made in small places where the cost is not likely to be heavy. There is no likelihood of any objection being raised by the villagers in this respect.
